

INSECTICIDES, FUNGICIDES, AND HERBICIDES

General Information

GENERAL INFORMATION: ACIDIPHACTANT acts to reduce the pH of pesticide spray solutions to a point where alkaline hydrolysis (degradation) of the pesticide will be minimized.

ACIDIPHACTANT also serves to increase the activity and effectiveness of insecticides, herbicides, fungicides and many other agricultural chemicals.

Limitations, Restrictions, and Exceptions

INSECTICIDES, FUNGICIDES, AND HERBICIDES

NOTE: Use rates may vary depending on water hardness and pesticide used. Some pesticides have stated adjuvant use rates. In all cases, the pesticide manufacturer's label should be consulted regarding specific adjuvant use recommendations and that rate followed. Do not add adjuvant at a level that would exceed 5% of the finished spray volume.
