

SEVERE DEFICIENCY - BROADCAST OR BAND APPLICATION

General Information

General Information

CORE 4.5% IRON HEDTA is a fully chelated, plant available, liquid micronutrient and hydroxyethylenediaminetetraacetic acid chelating agent for use in vegetable crops, field crops, trees, vines, turf and ornamentals.

Directions for Use

CORE 4.5% IRON HEDTA is compatible with most pesticides as well as Orthophosphates, APP or liquid N fertilizers commonly used in “2x2” placement as starter fertilizer, in a band, or in broadcast application. NOTE: Foliar application alone should not be a substitute for soil application. However, if foliar application is required, CORE 4.5% IRON HEDTA may be applied 30 days after planting and before flowering to correct deficiency. Application rates and dilution factors will vary and depend on crop sensitivity and amount of foliage to be sprayed. Dilute in a minimum of 50 gallons of water. If there is any doubt, apply the spray solution to a small test area of the crop or foliage to assess any undesirable effects or phytotoxicity before general application. Always conduct a jar test with new tank mixes to verify compatibility.

For correction or prevention of iron deficiency in agricultural crops, vegetable crops, turf, and ornamentals.
