

STONE FRUIT - SOIL APPLICATION

General Information

General Information

CORE Magnesium Nitrate solution is an effective, readily available source of liquid Magnesium for both soil and foliar applications. It may be applied in water sprays, with pesticides, or with most liquid fertilizers.

Limitations, Restrictions, and Exceptions

Apply first application at green tip or pink bud. Apply subsequent applications at fruit set or jacket fall, fruit thinning and 2 to 3 weeks prior to harvest, or as needed to meet nutritional requirements.
