

ALMONDS, APPLES, APRICOTS, AVOCADOS, ETC. - FOLIAR SPRAY

General Information

General Information

THRIVE GENERAL PURPOSE 20-20-20 is a balanced formulation for use to achieve all-around health in turf, ornamentals, shrubs, trees, vegetables, and field crops. THRIVE GENERAL PURPOSE 20-20-20 is formulated using the highest quality materials for optimum solubility and maximum performance.

General Applications

THRIVE GENERAL PURPOSE 20-20-20 may be applied at a rate of 5 to 10 lbs (2.27 to 4.54 kg) per acre as a foliar application as a supplement to normal soil applied fertility program. It may be applied by aircraft at rates as low as 5 lbs (2.27 kg) per 2 gal (3.8 liters) of water per acre. For backpack sprayers, use at a rate of 4 tsp (19.7 ml) per gal (3.8 liters) of water per acre.

Limitations, Restrictions, and Exceptions

Apply at a rate of 3 to 5 lbs per 100 gallons of water when applying as dilute sprays, or 5 to 10 lbs per acre when applying with concentrate sprayers. Apply early in the growing season and whenever supplemental feeding is necessary to improve tree vigor, fruit or nut set, or during adverse weather conditions. It can be applied in combination with almost all insecticide and fungicide programs (except as listed above). For most tree crops, 3 to 5 applications are desirable through the growing season. On many tree crops, late season applications of THRIVE GENERAL PURPOSE 20-20-20 will frequently improve tree vigor and increase bud set for the next crop. CAUTION: Late season nitrogen sprays applied at that time can delay fruit maturity and reduce fruit color on some varieties. Lower rates of THRIVE GENERAL PURPOSE 20-20-20 should be used until fruit is picked. Avoid combining with materials that may cause russetting.
