

## **EVERGREENS AND OTHER PLANTS (TRANSPLANTING AND OTHER USES)**

### General Information

#### GENERAL INFORMATION

VAPOR GARD is a water emulsifiable organic concentrate for use on plants to reduce water transpiration. The soft, flexible film formed after the spray application dries, will significantly reduce moisture lost by the plant foliage.

All anti-transpirant spray applications must be applied for full coverage. Spray VAPOR GARD for full coverage or use as a dip. No additional spreader is needed with VAPOR GARD. Apply VAPOR GARD at least one hour, during daylight, before an anticipated rain. Sunlight for this time period, is needed for the protective film to set. VAPOR GARD dries on plants to form a clear, glossy film which retards normal moisture loss without interfering with plant growth or normal respiration. VAPOR GARD beautifies plants by polishing leaf surfaces.

#### DIRECTIONS

Can Be Used On All Growing Plants Including: Trees (Deciduous and Conifers); Evergreens; Christmas Trees; Shrubs; Turf; Roses; Flowering Plants; Vegetable, Tobacco and Fruit and Nut Trees. Apply VAPOR GARD alone. CAUTION: Do Not apply in spray tank combination with any pesticide, on any crop.

#### Limitations, Restrictions, and Exceptions

EVERGREENS AND OTHER PLANTS (TRANSPLANTING and OTHER USES) - Flowers; Turf; Vegetables (such as tomato, pepper, melons, cucurbits, celery, cabbage, lettuce), Tobacco, Coffee and Fruit Transplants; Flowering Plants; Evergreen and Deciduous Trees and Shrubs: Spray or dip plants using VAPOR GARD at the rate of 1 part per 40 to 50 parts water before transplanting, to reduce transplanting shock. Use on established plants during growing season to reduce summer scald. Good spray coverage can usually be achieved on low growing plants, such as vegetable transplants, with 50 gallons of spray per acre. Be certain the bottoms as well as tops of leaves are covered by spray. VAPOR GARD can be applied to cut Christmas

trees to slow the drying process which also reduces the potential fire hazard. VAPOR GARD applications can be used to reduce damage from smog, air pollutants or salt mist from wind blown salt water.

CAUTION: For dip applications, maintain agitation by stirring the dip emulsion during the entire dipping period. Do Not dip plant roots.
