

# TURF

## General Information

Refer in the label for Suggested Spreader Settings.

## Limitations, Restrictions, and Exceptions

## Directions of Use

Apply to turf at a rate of 5 to 10 pounds per 1,000 sq. ft. (for a maximum application rate of 50 pounds per 1,000 sq. ft. per growing season) to generate good color without promoting unwanted top growth. Watering in is recommended for quicker response and better granule dispersion and is particularly recommended when application has been made to moist turf so spotting or staining does not occur. Apply to turf mowed to one-half inch or less only at the lower rate and only after testing to make sure unwanted spotting, staining, or phytotoxicity does not occur. Watering in thoroughly is recommended. Reapply as necessary to maintain desirable color.
