

SOIL APPLICATION - TRANSPLANTS

General Information

PRODUCT INFORMATION

Natural Wet is a special formulation which includes saponins derived from Yucca plants which is used by the Yucca plant to alleviate the stress suffered under unfavorable conditions. Natural Wet may also facilitate nutrient and water absorption into the plant and stimulate plant growth and development. The principle ingredients in Natural Wet are saponins which are saponogenin glycosides derived mainly from yucca plant extracts. The Yucca plant and similar plants have adapted to harsh environments. These plants produce the saponins that aid in their survival. Natural Wet can be applied to potting mixes to aid in the uniformity of water absorption.

Limitations, Restrictions, and Exceptions

Transplants: Mix Natural Wet with transplant water.
