

BLOOMING PLANTS

General Information

TOPCOAT is a blend of organic oil and inert ingredients specifically formulated for foliar application. It is designed to help protect leaves and fruit from adverse weather conditions such as heat and cold stress.

DIRECTIONS AND USE

Water plants thoroughly and allow time to take up water before applying TOPCOAT. Thoroughly coat upper and lower surface of all leaves and stems to run off. Apply 24-48 hours in advance of transplanting. If applied to edible foodstuff, last application should provide time for product to biodegrade prior to last harvest (30-45 days). Thoroughly wash sprayed fruit. Flush spray equipment with clean water immediately after use. For removal of dried product, soak in water until softened.

Limitations, Restrictions, and Exceptions

Spraying 7 qts. of TOPCOAT per 100 gal. of water (4 tsp. per 1 quart of water) may extend bloom by reducing moisture loss.

Propagation: 6 gal. of TOPCOAT per 100 gal. of water (4 tbsp. per 1 quart of water).
