

FOR DRY FERTILIZER IMPREGNATION

General Information

P Max is a phosphate fertilizer additive. When impregnated on dry phosphate fertilizers, P Max increases phosphate efficiency and plant uptake. P Max is not a substitute for recommended phosphate fertilization based on crop removal rates or yield goals.

Impregnate P Max onto dry phosphate fertilizer (e.g.: 0-46-0, 18-46-0, 11-52-0) during the receiving process as it is transferred into bulk storage or during the custom blending process.
