

## **PRE-CONSTRUCTION TREATMENT: CRAWL SPACES**

### General Information

#### DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

NOTE: Not For Use in New York State or California

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the Agency responsible for pesticide regulation.

Apply only when wind speed is 10 mph or less at the application site.

#### Limitations, Restrictions, and Exceptions

#### PRE-CONSTRUCTION TREATMENT

Do not apply at a lower dosage and/or concentration than that specified on the label when applying before installation of the finished grade.

Prior to each application, applicators must notify the general contractor, construction superintendent, or similar responsible party, of the intended termiticide application and intended sites of application and instruct the responsible person to notify construction workers and other individuals to leave the area to be treated during application and until the termiticide is absorbed into the soil.

**CRAWL SPACES:** Apply by trenching and rodding downward along the inside and outside of foundation walls, around piers, interior supports in contact with the soil, plumbing, and utility services. Apply four gallons of solution (see APPLICATION VOLUME) per 10 linear feet, per foot of depth to create a uniform treated zone. Rodding may be done from the bottom of a shallow trench to top of the footing or a minimum of 4 feet. When rodding, space rod holes to create a continuous chemical treated zone along the treated area. Rod holes must not extend below the footing. When trenching, the trench must be about 6 inches wide and 6 inches deep. Use a

low pressure spray to treat soil which will be placed in the trench, mixing the spray solution and soil together as it is being placed in the trench.
