

FOLIAR SPRAY PROGRAM FOR RICE: ALTERNATE RECOMMENDATION - TWO MILLIMETER (MM) PANICLE GROWTH STAGE

Limitations, Restrictions, and Exceptions

If the primary application is missed, ASCEND can be applied to stimulate cell differentiation in the developing panicle. This application must be made when no more than 10% of the main culms are at the 2 mm panicle growth stage. The 2 mm panicle growth stage occurs immediately after internode elongation or joint movement has begun. ASCEND must be applied as soon as internode elongation is detected so the 2 mm panicle growth stage is not missed. It is better to apply slightly early than to apply late. **IMPORTANT:** Timing of the application at 2 mm growth stage is critical. Check the entire field for stage of plant development. Large fields may require split applications on upper and lower ends of the field to ensure proper timing throughout the field.

-

Restricted Entry Interval

4 hours

If the product is soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.
