

# **AIR AND GROUND - FOR IMPROVED EFFICACY**

## General Information

### DIRECTIONS FOR USE

WESTLINK AG SPREADER BUFFER is designed to increase the efficiency of acaracides, defoliants, desiccants, fungicides, herbicides and insecticides, especially organophosphate pesticides. It assures quick wetting and uniform coverage of spray applications. WESTLINK AG SPREADER BUFFER may be used on agricultural, forestry, turf and ornamental, industrial, structural and non-cropland sites. It should also be used to buffer highly alkaline water.

WESTLINK AG SPREADER BUFFER is formulated from materials which do not tend to burn foliage or leave harmful residues. There will be no excessive foaming when high pressures are used.

RECOMMENDATIONS: Proper quantity to use will vary with the type of equipment, water volume per acre, temperature, type of foliage to be wet, and the pesticide formulation. Also, higher rates than those below may be used if recommended by pesticide labeling. Follow pesticide label directions. However, do not add this product at a rate which exceeds 5% of the finished spray volume.

### Limitations, Restrictions, and Exceptions

AIR or GROUND: Use 1/2-3 pints per 100 gallons of finished spray solution. For improved efficacy, use at least 1/2 pint per acre when finished spray volume is less than 20 gallons per acre.
