

# PLUG AND PROPAGATION SOIL MIX

## General Information

### GENERAL INFORMATION

Zeba is a biodegradable, non-toxic, starch-based superabsorbent polymer. It is designed to rapidly absorb and maintain moisture in the root zone, releasing moisture to plants as needed.

### Limitations, Restrictions, and Exceptions

Plug and Propagation Soil Mix: For plug trays with 200 cells or more use Zeba at the rate of 2.5-5 Tbsp. (16.7-33.5 g/5.6-11.2 ml) per cubic foot of potting soil, or 4.5-9 cups/1-2 lbs. (454-908 g/1-2.12 L) per cubic yard. Because of the fine particle size, Rott Dip is extremely absorbent. To avoid clumping add the material slowly in small amounts to the soil. Mix Zeba thoroughly into soil.
