

TURF SEEDING

General Information

GENERAL INFORMATION

Zeba is a biodegradable, non-toxic, starch-based superabsorbent polymer. It is designed to rapidly absorb and maintain moisture in the root zone, releasing moisture to plants as needed.

Limitations, Restrictions, and Exceptions

Turf seeding

Broadcast Zeba evenly at the rate of 3.5-10.5 cups (1-3 lbs.) per 1,000 square feet [3.75-11.25 cups (0.5-1.5 kg) per 100 square meters] with the seed onto dry soil area. Rake seed and Zeba into the top ½ inch [1.27 cm] of prepared soil and then water thoroughly.
