

# LOCALIZED DRY SPOT REPAIR, PATCHING AND COMPACTED AREAS

## General Information

### GENERAL INFORMATION

Zeba is a biodegradable, non-toxic, starch-based superabsorbent polymer. It is designed to rapidly absorb and maintain moisture in the root zone, releasing moisture to plants as needed.

### Limitations, Restrictions, and Exceptions

#### Localized Dry Spot Repair, Patching, and Compacted Areas

Aerify affected areas with at least ½ inch [1.27 cm] diameter aerifier tines, spread Zeba at the rate of 3.5-10.5 cups (1-3 lbs.) per 1,000 square feet [3.75-11.25 cups (0.5-1.5 Kg) per 100 square meters] over area (soil or turf area should be dry), brush or drag granules into holes and water thoroughly. To be effective, Zeba must be placed below the grass and into the soil at 1-3 inches [2.5-7.5 cm] below soil surface.
