

GENERAL SOIL APPLICATION FOR ALL CROPS - SEVERE DEFICIENCY

General Information

General Information

CalPatible Zinc is calcium compatible. May be mixed with liquid calcium fertilizers such as calcium nitrate, calcium chloride and/ or calcium organic acid complexes.

CATS or Calcium Thiosulfate is not recommended to be mixed with CalPatible Zinc.

CalPatible Zinc is a part of the Bio-Gro, Inc. CHB line of primary (N, P & K), secondary (Ca & Mg) and micronutrients (Zn, Mn, Cu, B & Fe) manufactured specifically as a liquid fertilizer to help prevent and correct nutrient deficiencies that may limit crop growth and yields. CalPatible Zinc is a supplement to an adequate and balanced soil fertility program. We recommend that you consider proper placement and application timing.

Applications - CalPatible Zinc can be applied by ground equipment and through irrigation systems. Recommended soil applications include banding and broadcast. Recommended fertigation methods include water run, sprinkler and drip irrigation. When using high rates avoid direct contact with living plant material or ensure an adequate volume of water to dilute CalPatible Zinc on plant surface.

Limitations, Restrictions, and Exceptions

Suggested Applications

Optimum rate of application will vary between fields depending on soil and/or climatic conditions, stage of crop growth and size of plants. Application rates are best determined by results from soil/plant analysis. For this reason we recommend that you contact your qualified Bio-Gro, Inc. product representative or agronomist with soil/plant analysis for evaluation.

Fertigation: Apply the required amount of product in split applications one to two weeks apart throughout the growing season.
