

DIRECTED OR BROADCAST STEM AND FOLIAGE SPRAYING

General Information

GENERAL INFORMATION

This product is a highly refined emulsifiable petroleum oil to be used as a carrier (diluent) or adjuvant and mixed with oil soluble herbicides for woody plant control in forest and other non-crop sites where diesel oil, fuel oil, kerosene and similar oil carriers or additives are recommended. When used as a carrier or adjuvant, this product will aid in the spreading and penetration of herbicides into bark and stems of woody plants.

Limitations, Restrictions, and Exceptions

For directed or broadcast stem and foliage spraying: When allowed by the herbicide label, this product can be used as the sole carrier for herbicides or used with herbicide/water mixtures to improve spreading and penetration into the plant. For herbicide and water mixtures use up to 40% of this product by volume in these mixtures. Consult the herbicide label being used for proper mixing sequences. Since an emulsion is formed, maintain agitation to prevent separation.

When used as the sole carrier with oil soluble herbicides add the required amount of herbicide to this product in the spray tank. A true solution is formed, but agitation is recommended. Consult the herbicide label of the product being used for use rate and volume per acre recommendations. If the compatibility of mix components is unknown, conduct a jar test before mixing large quantities.

Use coarse sprays or special equipment designed to minimize spray drift.
