

RATES - 1 QUART PER ACRE CROP OIL CONCENTRATE

General Information

GENERAL INFORMATION:

DIPLOMAT is a low-use rate, petroleum/phytobland oil based adjuvant that enhances performance of spray applications. DIPLOMAT replaces traditional crop oil concentrates and is formulated to be used at lower rates.

DIRECTIONS FOR USE:

DIPLOMAT increases the effectiveness of pesticides and is designed for use with certain pesticides. Always follow the label of the specific pesticide for detailed adjuvant use directions. DIPLOMAT may be used for agricultural, commercial and industrial uses with pesticides labeled accordingly. The following use rates are considered to be adequate for most applications. Some pesticides may require different rates for optimum effect.

MIXING INSTRUCTIONS:

Fill spray tank half-full with water. Then add pesticide per label recommendations and continue filling. Add proper amount of DIPLOMAT last, and continue agitation.

USE PRECAUTIONS:

DIPLOMAT increases the effectiveness of some pesticides. During periods of high temperatures and/or extreme humidity, some pesticides may become more active. It is recommended that a small test area be treated if such conditions prevail. Test areas are also recommended in the treatment of new crop varieties or highly inbred crop lines.

Limitations, Restrictions, and Exceptions

Dilute with water and apply at 1 pint per acre for pesticides suggesting 1 quart per

acre crop oil concentrate.

For total carrier volumes less than 12 GPA, use 1 pint of DIPLOMAT per acre.
