

SOIL APPLICATION FOR BEGINNING DEFICIENCY

General Information

MICRO-MIX is a high zinc trace nutrient fertilizer that contains complexed zinc, iron, manganese and boron to satisfy the needs of your plants for essential micronutrients. The micro-nutrients are completely complexed and contain a base of natural organic and amino acids, which are readily biodegradable, and supply energy to the plant. MICRO-MIX is an excellent product to be used as a starter fertilizer or in banding applications. It is an essential foliar for effective micro-nutrient uptake.

MICRO-MIX may be mixed with 10-34 at proper dilutions (jar test is recommended when mixing with 10-34). The organic acids, amino acids and carbohydrates make this an excellent general purpose foliar/ soil product when more than one trace element nutrient is deficient.

Other Benefits of MICRO-MIX

- MICRO-MIX is designed to provide effective uptake, translocation and utilization to the growth site.
- Nutrients are quickly absorbed by the plant for a fast response.

Limitations, Restrictions, and Exceptions

SOIL APPLICATION RATES: Use at least 20 parts water to 1 part BAICOR fertilizer. Do not apply directly to seeds unless it has been determined/tested by the consultant or grower that it is not harmful or injurious to the seed.
