

SOIL APPLICATION - BEGINNING DEFICIENCY

General Information

Zinc-Shotgun is a fertilizer that focuses on micronutrients to satisfy needs of customers seeking high zinc with manganese, iron and copper. The micronutrients are completely chelated with natural organic acids, amino acids, and carbohydrates that are readily bio-degradable and supply energy to the plant and soil microflora.

Many soils are low in zinc and also require other micronutrients for the growth of good crops.

Benefits of Zinc Shotgun

- Complete, organically complexed micronutrient package containing essential elements to improve plant health and growth.
- Organically complexed with plant based amino acids, organic acids and complexed polysaccharides.
- The nutrients are readily absorbed by the plant for a faster response.
- Designed to be applied both by foliar application and fertigation practices and is also effective when applied directly to the soil.

Limitations, Restrictions, and Exceptions

Do not apply directly to seeds unless it has been determined/tested by the consultant or grower that it is not harmful or injurious to the seed.
