

IRRIGATION WATER APPLICATION

General Information

General Information:

When BHF-10 is applied at recommended rates to the soil, bhf-10 may aid in the uptake of micronutrients.

Directions for Use: BHF-10 is most effectively applied through irrigation water. bhf-10 can be effectively applied through any irrigation system, including drip, micro-sprinkler, sprinkler, center pivot, furrow and flood.

BHF-10 can also be sprayed directly on the soil surface preceding irrigation.

General Soil rates: apply 4 to 10 gallons of bhf-10 per acre two times during the crop cycle. rates and application timing varies for specific crops and soil conditions. contact the sobec, inc. for specific recommendations.
