

AERIAL

General Information

GENERAL INFORMATION:

PLEXUS is a complex network of adjuvant components linked together to create a superior, efficacious, efficient and easy-to-use adjuvant. PLEXUS contains surfactant advancements coupled with synergistic alkanolates and polymers to create a green, low

use rate biological activator adjuvant that maximizes pesticide activity both physically and biologically.

Performance improved from physical properties:

- Emulsion
- Reduction in fines
- Retention
- Wetting
- Spreading
- Pesticide Coupling/Compatibility

Performance improved from physical biological properties:

- Increased penetration at the cuticular and cellular levels

PLEXUS may be used with pesticide products that either require or suggest the use of a surfactant, crop oil concentrate, modified seed oil or combination adjuvant.

MIXING INSTRUCTIONS:

Always add PLEXUS last to the spray mix and continue agitation, unless directed otherwise by the specific pesticide label. Always follow the label of the specific pesticide for detailed adjuvant use directions.

A nitrogen source may be added to PLEXUS when required or

suggested by the pesticide label.

Limitations, Restrictions, and Exceptions

Aerial: For 5 gallons per acre spray solution application rate or less, apply at 1% volume/volume.
