

HAND HELD AND BACK-PACK SPRAYERS

General Information

GENERAL INFORMATION

Cornbelt Tank and Equipment Cleaner is a powerful superior grade, spray tank cleaner. Cornbelt Tank and Equipment Cleaner will clean, rinse and emulsify pesticide and adjuvant residues and bond them to the rinse solution to allow for complete rinsing and system purging with ordinary water. Cornbelt Tank and Equipment Cleaner is tolerant to hard water; this characteristic prevents spray tanks from accumulating high residue levels. Cornbelt Tank and Equipment Cleaner is totally soluble and compatible with all spray tank materials while also containing corrosion inhibitors. Cornbelt Tank and Equipment Cleaner neutralizes acid residues of pesticides, preparing the spray tank for the use of other products. Neutralization of residue spray materials will prevent damage from occurring to nontarget plants.

NOTE

The use of Cornbelt Tank and Equipment Cleaner or other Tank Cleaners does not guarantee removal and/or neutralization of all residues. Some pesticides, such as 2,4-D and Dicamba, may leave persistent or hard-to-remove residues. Many variables exist which make consistent tank cleaning difficult (i.e. water quality, use of cleaning equipment, quantity and type of residue, age and condition of spray tank, spray lines, nozzles etc.). In order to ensure that all residues have been removed, apply a sample of the rinse water to sensitive plants (tomato, cotton, ornamentals, etc.) and after sufficient time, observe for wilting or severe stress. If stress occurs, repeat cleaning process and retest as above.

Limitations, Restrictions, and Exceptions

HAND HELD AND BACK-PACK SPRAYERS

Use approximately one ounce of Cornbelt Tank and Equipment Cleaner per gallon of water, agitate thoroughly drain and follow with a clean water rinse.
