

CHEM-KEY LIQUID IRON

General Information

CHEM-KEY LIQUID Iron is a complexed liquid micronutrient compound containing sulfur and iron. It is designed for foliar and soil application for prevention and correction of iron deficiency. It is recommended for use as an additive in liquid or dry fertilizers. It is compatible with most agricultural pesticides.

CHEM-KEY LIQUID Iron tank-mixed in water will decrease alkaline hydrolysis associated with organo-phosphate pesticides.

CHEM-KEY LIQUID Iron is NOT RECOMMENDED for use with pesticides that are not compatible with acid materials. DO NOT MIX WITH HIGH PHOSPHATE LIQUID FERTILIZERS.

Limitations, Restrictions, and Exceptions

DIRECTION FOR USE

CHEM-KEY™ LIQUID Iron may be applied by ground or aerial application. Use sufficient water for thorough and uniform coverage of foliage or soil. Foliar application is recommended when fast correction is desired. For best results use a non-ionic surfactant.

CHEM-KEY™ LIQUID Iron will disperse in water with minimal agitation. It serves as a buffer when used in tank mixes with pesticides.

Always check compatibility before mixing. Use only the following sequence:

1. Water
2. CHEM-KEY™ LIQUID Iron
3. Pesticide or fertilizers.

RECOMMENDED RATES

Rates and timing of application are dependent on local conditions and should always be made as a result of soil and/or plant tissue analysis. Local climatic

conditions, infestations and other factors affect the performance of any pesticide or nutritional spray. Therefore, consult your local chemical company representative or agricultural extension agent for specific use information in your area.
