CABBAGE (DIRECT SEEDED)

General Information

APPLICATION PRECAUTIONS

- Use coarse sprays that are less likely to drift out of the target area.
- Contact with Willowood Clomazone 3ME through foliar contact or spray drift or vapors can cause foliar whitening or yellowing of sensitive plants. These symptoms are usually temporary, but can persist on some plant species.
- Observe all buffer restrictions.
- Determine air movement and direction before applying this product.

APPLICATION RESTRICTIONS

- DO NOT apply this product when air currents can carry spray particles to areas where sensitive crops are growing.
- DO NOT apply this product when temperature inversions exist.
- DO NOT apply this product without an adequate buffer zone between the area to be treated and desirable plants.
- DO NOT apply aerially or through irrigation equipment.
- DO NOT apply this product within 1,200 feet of towns and housing developments, commercial fruit/nut or vegetables (except for peppers, pumpkins, succulent peas, sweet corn, sweet potato, and winter squash) production facilities, commercial greenhouses, or nurseries.
- DO NOT apply this product in winds above 10 miles per hour.
- DO NOT apply this product to non-field areas such as fence rows, waterways, ditches, and roadsides.
- DO NOT allow spray solution to spray or drip from tanks, hoses, fittings or spray nozzles and tips when moving spray equipment to noncontiguous sites.
Limitations, Restrictions, and Exceptions

VEGETABLE CROPS

Willowood Clomazone 3ME can be used as a soil applied treatment prior to weed emergence to suppress and/or control annual grasses and broadleaf weeds in snap beans (succulent), cabbage, cucumbers, peas (succulent), peppers, squash (including processing pumpkins) and sweet potatoes.

Make a single application in a minimum of 10 gallons of water per acre. Apply to soil prior to weed emergence, prior to vegetable seeding or transplanting, or after vegetable seeding, but prior to crop emergence. Place seed or roots of the transplants below the chemical barrier when planting.

Vegetable Precautions

Off-site movement of Willowood Clomazone 3ME by spray drift or vapors can cause foliar whitening or plant yellowing.

Vegetable Restrictions

DO NOT spray Willowood Clomazone 3ME within 300 feet of desirable plants. Check for adequate buffer zone before application.

SOIL TEXTURES:

Select specified rates within the range based on light to heavy soil types within a textural group:

Coarse (light) soils: sand, loamy sand, sandy loam

Medium soils: loam, silt, silt loam, sandy clay, sandy clay loam

Fine (heavy) soils: silty clay, clay loam, silty clay loam, clay

Common Ragweed, Jimsonweed, Smartweed: Controlled at 1-1.5 lb ai / acre.

Vegetable Replanting Instructions
- If the initial planting of newly planted vegetables or seeds do not produce a uniform stand, replant vegetables in fields treated with Willowood Clomazone 3ME alone.

**Vegetable Replanting Restrictions**

- DO NOT retreat field with a second application of Willowood Clomazone 3ME.

- DO NOT replant treated fields with any crop at intervals that are not consistent with the Rotational Crop Restrictions on the label.

**Cabbage**

- Use the lower specified rate on coarse soils and the higher specified rate on fine soils.

**Method**

- **Broadcast**

**Pre-Harvest Interval**

- 45 days

**Rates**

- **field_rates 0**

**Restricted Entry Interval**

- 12 hours

Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

**Timings**

- **Preemergence (Weed)**
