

COTTON - AIR APPLICATION

Limitations, Restrictions, and Exceptions

Cotton - Defoliation - Do not treat later than 7 to 10 days prior to harvest. Thorough coverage of the plant is essential. The maximum application rate is 6 lbs./A per application. A maximum of one application per year is permitted, except in California, where a maximum of two applications per year is permitted.

Air Application: Apply 2.3 to 4.6 quarts of CoreAgri Poly-Foliant V Defoliant-Desiccant per acre in sufficient water to make 4 to 10 gallons total solution per acre. Use the lower rate when plants and weather conditions are ideal for defoliation. Swath width should not exceed wingspread; altitude and speed of aircraft should be regulated to give sufficient spray coverage. Do not apply during periods of excessive wind as spray may drift and cause defoliation of adjoining cotton or injury to other crops. Do not apply during very high temperature found in some areas at mid-day.
