

COTTON - GROUND APPLICATION

Limitations, Restrictions, and Exceptions

Cotton - Defoliation - Do not treat later than 7 to 10 days prior to harvest. Thorough coverage of the plant is essential. The maximum application rate is 6 lbs./A per application. A maximum of one application per year is permitted, except in California, where a maximum of two applications per year is permitted.

Ground Machine Application: Apply 2.3 to 4.6 quarts of CoreAgri Poly-Foliant V Defoliant-Desiccant per acre in sufficient water to make 15 to 30 gallons total solution per acre. Cotton defoliants should be applied when 70% of the bolls are open. Poor defoliation often occurs under unfavorable weather, soil moisture, fertility and plant conditions. Uniform defoliation within a field may sometimes be difficult to obtain because of irregular plant conditions. Satisfactory defoliation within a field may not be obtained when cotton plants are suffering from lack of moisture or when plant growth is retarded by cold weather. Do not graze treated areas or feed gin waste to livestock. Flush out equipment with water after each day's work.
