

RASPBERRY AND BLACKBERRY

General Information

PHOSGARD is a nutritional supplement for a variety of crops. When applied properly it may be beneficial to plant growth, crop yield, and quality. Phosgard 0-0-26 can be used as soil and/or foliar applications. It can also be applied through irrigation water.

STATEMENT OF PRODUCT

When applied as a soil application to annual crops, a lesser response from the initial crop, with a corresponding superior response from succeeding crops, may be observed. In addition, placement close to seeds or root zones may be injurious to crops. The effect may be aggravated by a soil pH below 6.5.

FOLIAR APPLICATION: Phosgard 0-0-26 may be applied by air and concentrate or dilute ground sprayers. It should be diluted with at least 100 times of water.

Limitations, Restrictions, and Exceptions

Raspberries and Blackberries: Apply 32-64 oz. per acre (3-5 liters/hectare) pre-bloom with subsequent applications at 30 to 90 day intervals or as needed.
