

# NONIONIC SURFACTANT

## General Information

### GENERAL INFORMATION

CLASS ACT NG, a water conditioning agent (Ammonium Sulfate)/Nonionic Surfactant Blend, is a low foam formula for use with pesticides that are labeled for agricultural, aquatic, forestry, non-cropland, and right-of-way uses. CLASS ACT NG is formulated to meet the surfactant and ammonium sulfate recommendation for many glyphosate, glufosinate, paraquat, and diquat products or other herbicides requiring the addition of nonionic surfactant and ammonium sulfate. CLASS ACT NG reduces potential antagonism and improves uptake of most nutrients in foliar applications. This patented formulation contains 1.3 pounds of sugar per gallon.

### Limitations, Restrictions, and Exceptions

### SHAKE WELL BEFORE USING (NONIONIC SURFACTANT)

### DIRECTIONS FOR USE

CLASS ACT NG may be used at a rate of 2.5-5.0% v/v (2.5-5.0 gallons per 100 gallons of spray solution). This meets Roundup Original, Cornerstone and similar product label requirements for 0.5-1.0% v/v nonionic surfactant plus 8.5-17 pounds of dry ammonium sulfate per 100 gallons of water. Follow herbicide label for specific rates, mixing instructions and other precautionary instructions. Do not mix CLASS ACT NG with INTERLOCK in an induction system or container when both products are undiluted. Once mixed in water, both products are compatible in either mixing order.

Equivalent Quarts of Nonionic Sufactant: 2-4 qt

Gallons of Class Act NG per 100 gallons of water: 2.5-5
