

FOR USE WITH AGRICULTURAL, FORESTRY, INDUSTRIAL, ETC.

General Information

GENERAL INFORMATION

- FS Infix is a specialized utility modifier that acts as a pH adjuster and water conditioner with built in compatibility agents that widen the conditions under which glyphosate and other weak acid herbicides can be applied. FS Infix maintains the integrity of the spray diluent (water) and protects herbicides from deactivation by hard water cations and micronutrient based tank mix partners.

DIRECTIONS FOR USE

- FS Infix increases the activity of many pesticides; therefore, take care when treating sensitive crops during periods of drought stress, high temperatures, or high humidity. It is critical that this product be used and mixed only as specified on the label. Follow directions carefully. Buyer and user assume all risk of use and/or handling. These risks include, but are not limited to damage to plants and/or crops to which the material is applied, or lack of complete control and damage caused by drift to other plants or crops. Such risks may occur even though the product is reasonably fit for use and label directions are followed. Timing, mixing, method of application, weather and other conditions are influencing factors in the use of this product and are beyond the control of GROWMARK.

Limitations, Restrictions, and Exceptions

APPLICATION RATES

- Apply FS Infix at 1–4 quarts per 100 gallons of spray solution (1–4 liters per 400 liters of spray solution) or 0.25–1.0% v/v. Use rates less than 1% v/v when pH modification and protection from hard water cations is needed. Apply at the 1% v/v use rate when tank mixing with micronutrients. Apply up to 2.5 lb. per acre of manganese sulfate or up to a total of 2 lb. per acre in a 3 to 1 (Mn:Zn) ratio.
