

## **FIELD CROPS (ALFALFA, SUGAR BEETS) - SOIL APPLICATIONS**

### General Information

#### GENERAL INFORMATION

This soil nutrient is an effective, readily available for soil and foliar application. It may be applied in water or mixed with most liquid fertilizers, micronutrients, or pesticides.

#### DIRECTIONS FOR USE

Use as least 1 gallon of water for each pint of product applied to the crop.

Foliar Application: Apply with enough carrier to cover all foliage. Early morning or late evening applications give best results. The product is not easily translocated within the plant, therefore multiple foliar applications at low rates during the growing season are most effective.

Soil Application: Soil-applied product must be moved into the root zone to be absorbed by the plant. This can be accomplished by irrigation, rainfall, or tillage.

For soil use in tree crops, incorporate product into the soil by irrigation or tillage within the drip line.

#### WARNING

Over-application or excessive use of boron can result in boron toxicity. This may cause foliar damage or serious crop injury. The proper use of soil test recommendations will minimize the risk of over-application of boron.
