

FOR USE ON HARVESTED FRUITS AND VEGETABLES

General Information

USED ALONE: This concentrate can be used also as a clean-up or a pre-harvest spray where other materials cannot be used because of residue restrictions. Contains natural pyrethrins.

Do not apply the product through any type of irrigation system.

USED AS A TANK MIX WITH OTHER INSECTICIDES: The product may be combined with other insecticides and acaricides where resistance may be a problem and to provide flushing of insects from hiding and into contact with other spray residues. This application should conform to accepted use precautions and directions for both products.

This concentrate is relatively non-toxic to honey bees. To avoid possible harm to honey bees, it is advisable to apply in the early morning or late evening hours.

Limitations, Restrictions, and Exceptions

FOR USE ON HARVESTED FRUITS AND VEGETABLES: To control *Drosophila* spp. and Tephritid spp. fruit flies dilute this concentrate at the rate of 1 part with 600 parts water (1 pint per 75 gallons or 1 tablespoonful with 2 gallons water). Thoroughly mix the emulsion in the spray tank and treat as follows:

- 1) Apply liberally to fruits and vegetables in baskets, on trucks and in plants. Use sprayers at a high pressure for applying at the rate of five or six pints of diluted spray to a 2 ton load of produce. Direct the spray for maximum coverage of the baskets or hampers. It not only kills the flies, but the emulsion loosens any dead flies so they are readily washed from the fruit.
- 2) Spray the raw stock stacked in the yard.
- 3) Dip baskets in the diluted spray, after dumping the produce to kill adhering larvae and pupae.
