

FOLIAR APPLICATIONS

General Information

GENERAL INFORMATION

NUE CARBO-Chelate is a blend of naturally produced organic and amino acids designed for chelation of soil & foliar applied minerals such as Ca, Cu, Fe, Mg, Mn & Zn.

NUE CARBO-Chelate can be used as an aid for the prevention of precipitation of minerals in the spray tank.

NUE Chelate is also a trace mineral compatibility agent. It can be used to blend liquid phosphate fertilizers with trace elements such as Ca, Mg, Zn, Mn, Cu & Fe.

Each NPK & Trace mineral blend requires specific amounts of NUE Carbo-Chelate for optimum chelation, compatibility and cost.

DIRECTIONS FOR USE

Dilution and Spray Volumes - Always use enough water for uniform application and to prevent possible plant tissue damage to the intended crop from concentrated droplets.

Limitations, Restrictions, and Exceptions

SUGGESTED APPLICATION

Can be water run with any liquid fertilizer application. 2-gallon rates should be spread out over 3-4 applications for most effectiveness.
