

# GRAPES AND KIWIS

## General Information

### General Information:

pHertigation 0-30-0 is a specially formulated phosphate nutrient for soil application. The phosphorus source in pHertigation 0-30-0 is white phosphoric acid, which is readily available orthophosphate. pHertigation 0-30-0 is designed to provide maximum availability of phosphorus which influence plant growth and crop quality when applied according to label directions. Nutrients and growth factors associated with phosphorus are increased root development, increased stalk and stem strength, and improved flower formation and seed production. pHertigation 0-30-0 is a supplement to an adequate and balanced soil and foliar fertility program. Monitor crop nutrient needs and responses with a soil and leaf tissue analysis program.

### Directions for Use:

pHertigation 0-30-0 can be applied alone or mixed with other compatible fertilizers through fertigation or with conventional soil application methods. When applying this material via a fertigation system, continue to operate the system 30-60 minutes after material has completely injected to flush clean water through the system. pHertigation 0-30-0 can be blended with water to insure adequate coverage and uniform application.

## Limitations, Restrictions, and Exceptions

### Grapes & Kiwis

Soil: Apply 5 gallons per acre at bud break and again at pre-bloom to support root growth. Apply again during berry sizing. Apply a minimum of 2 gallons per acre per application for a total of 10 gallons per season. Repeat applications may be made up through soft berry, in 14-21 day intervals.
