

## **SOIL APPLICATIONS - DRIP IRRIGATION**

### General Information

#### PREPARING TANK MIX SOLUTIONS

Thoroughly clean all spray mixing and application equipment prior to and following each use.

Unless directed otherwise by mixing instructions on the label of product to be tank mixed with GROW-PLEX SP, follow these procedures:

1. Add the desired amount of water to the tank and begin agitation. Add desired spray adjuvant (wetting agent) if the application requires it to be used. GROW-PLEX SP will wet and disperse readily with-out an adjuvant.
2. Drip-irrigation add GROW-PLEX SP at a rate of 4 to 8ozs/Acre (250 to 500 gms/Hectare). Foliar add GROW-PLEX SP at a rate of 2 to 4 ozs/Acre (125 to 250 gms/Hectare).
3. Add liquid fertilizer. Do not tank mix with herbicides.

Do not mix GROW-PLEX SP directly with undiluted tank mix partners until you have "jar tested" in a separate container the proportionate amount of GROW-PLEX SP to make sure the products are compatible prior to tank mixing. Agitate and let stand 10 minutes. Settling that does not disperse indicates an incompatible mixture.

4. Continue filling while agitating until all added products are thoroughly mixed into spray solution.

### Limitations, Restrictions, and Exceptions

#### Soil Applications

Dissolve in sufficient water (100 gallons) to provide uniform application and then add liquid fertilizer or other tank mix partners. See instructions on the label (Preparing Tank Mix Solutions). Apply banded, in-furrow, side-dressed, or through flood, furrow or drip irrigation.
