

FOR INSECTICIDES, HERBICIDES AND FUNGICIDES

General Information

GENERAL INFORMATION

A nonionic general purpose spreader-activator for use on all plants to improve the effectiveness of insecticides, herbicides and fungicides. Provides more uniform leaf coverage without excess run-off spray on the leaf surface. Enhances the effectiveness of insecticides, herbicides and fungicides.

Limitations, Restrictions, and Exceptions

For insecticides, herbicides and fungicides, use 1/2 to one (1) pint per each 100 gallons of finished spray solution. (In some cases as much as two (2) quarts per 100 gallons will be recommended). Some pesticides may require higher rates of RNA Activator 85 for optimum performance. However, do not add this product at a rate which exceeds 5% of the finished spray volume. Follow pesticide label directions when this occurs. Always add RNA Activator 85 to the spray tank as the last ingredient with agitator running.
