

FRUIT AND NUT TREES AND GRAPE VINES AND OTHER VINES (1 GAL / ACRE)

General Information

GENERAL INFORMATION

Shine K is a liquid foliar fertilizer, providing a readily available source of Potassium to correct deficiencies during primary growth stages. Shine K can be applied to trees, vines, field or row crops throughout the year, but is most beneficial when applied during sizing and ripening, and during periods of limited potassium availability.

This material contains 2.15 lbs. of Soluble Potash, as K₂O, in each gallon. Shine K is for use in foliar sprays. It is intended to be a supplement to a fertility program. Always monitor crop nutrient needs and responses with a soil, leaf tissue and irrigation water analysis program.

DIRECTIONS FOR USE

Shine K may be foliar applied. In a clean spray tank, add any dry powders and water and agitate. Add other liquid fertilizers first and then add Shine K, continuing agitation. Always add Shine K to the tank before adding any pesticides.

Concentration of this material should not be less than 0.5% or exceed 5% (volume to volume) in the finished spray solution. Always use enough water for uniform application and to prevent possible plant tissue damage to the intended crop from concentrated droplets. Contact your Source to Source representative for ultra-low volume rates. Apply during the cool part of the day, or when temperatures are below 85° F. Do not apply under windy conditions, or other conditions that promote fast drying of leaf surfaces. Do not store diluted material.

Refer to the product label for the Foliar Spray Concentration Ratio Examples.

Limitations, Restrictions, and Exceptions

FRUIT AND NUT TREES AND GRAPE VINES AND OTHER VINES (1 GAL / ACRE)

- Apply every 7-10 days as needed, starting at bud swell or early shoot development. Avoid applications during bloom.
