

FRUIT AND NUT TREES AND GRAPE VINES AND CANES (1-2 GALS/ ACRE)

General Information

GENERAL INFORMATION

Shine 2-13-13+Micros is a liquid foliar fertilizer, providing a readily available source of Potassium and Phosphorus, along with micronutrients to correct deficiencies during primary growth stages. Shine 2-13-13+Micros can be applied to trees, vines, field or row crops throughout the year, but is most beneficial when applied during sizing and ripening, during periods of limited potassium and phosphate availability and micronutrient deficiencies are anticipated. This product is intended to be a supplement to an adequate and balanced fertility program. Monitor crop nutrient needs and responses with a soil, leaf tissue and irrigation water analysis program.

DIRECTIONS FOR USE

Shine 2-13-13+Micros should be foliar applied for best results. In a clean spray tank, add any dry powders and water and agitate. Add liquid fertilizers and Shine 2-13-13+Micros last, continuing agitation. Mix with water in a maximum concentration of 1 gallon of Shine 2-13-13+Micros per 7.5 gallons of finished solution. Always use enough water for uniform application and to prevent possible plant tissue damage to the intended crop from concentrated droplets. Contact your Source to Source representative for rates when using low-volume and electrostatic sprayers. Apply during the cool part of the day, or when temperatures below 85° F. Do not apply under windy conditions, or other conditions that promote fast drying of leaf surfaces.

Limitations, Restrictions, and Exceptions

FRUIT AND NUT TREES AND GRAPE VINES AND CANES (1-2 GALS/ ACRE)

It is also recommended to apply 1-2 gals per acre:

- After petal fall, repeated at 10-14 day intervals
- When fruit is sizing

- With all summer sprays
- Prior to and during the fruit coloring or ripening process
- In anticipation of micronutrient deficiencies
