

STRAWBERRIES

General Information

Agro-K's line of liquid plant food fertilizers is specifically designed for foliar applications, where product purity is critical. Because of this the AGROBEST line of liquid plant food is derived only from food-grade sources of nitrogen, phosphorus and potassium. The result is a product of unparalleled purity and quality with a low salt index. AGROBEST liquid plant food fertilizers are designed for rapid uptake and absorption through plant tissue and stomata.

In addition to the best quality macronutrients, AGROBEST 10-8-8 contains a balanced blend of organically chelated micronutrients and just the right amount of Agro-K's unique seaweed extract - Symspray. Together, these trace elements and the Symspray are ideal for correcting minor deficiencies and maximizing plant vigor, health and production.

To maximize plant yields AGROBEST 10-8-8 should be used in combination with a comprehensive ground fertility program and applied at appropriate times and growth stages for the individual crop.

Limitations, Restrictions, and Exceptions

Strawberries

Apply the first application 7-10 days after transplanting. Reapply at 7-14 day intervals or as needed to supplement nutritional requirements.
