

TRANSPLANT SOLUTIONS

General Information

Agro-K's line of liquid plant food fertilizers is specifically designed for foliar applications, where product purity is critical. Because of this the AGROBEST line of liquid plant food is derived only from food-grade sources of nitrogen, phosphorus and potassium. The result is a product of unparalleled purity and quality with a low salt index. AGROBEST liquid plant food fertilizers are designed for rapid uptake and absorption through plant tissue and stomata.

Due to product purity, AGROBEST liquid plant food fertilizers can also be placed directly on seeds during planting or via traditional offset planting. To maximize plant yields AGROBEST liquid plant food fertilizers should be used in combination with a comprehensive ground fertility program and foliar applied at appropriate times and growth stages for the individual crop.

Limitations, Restrictions, and Exceptions

Transplant Solutions: If using AGROBEST liquid plant food as a transplanting solution mix, the recommended dilution rate is 1 gallon per 100 gallons of water.
