

SOIL APPLICATION - PERENNIAL CROPS

General Information

Agro-K's line of liquid plant food fertilizers is specifically designed for foliar applications, where product purity is critical. Because of this the AGROBEST line of liquid plant food is derived only from food-grade sources of nitrogen, phosphorus and potassium. The result is a product of unparalleled purity and quality with a low salt index. AGROBEST liquid plant food fertilizers are designed for rapid uptake and absorption through plant tissue and stomata.

Due to product purity, AGROBEST liquid plant food fertilizers can also be placed directly on seeds during planting or via traditional offset planting. To maximize plant yields AGROBEST liquid plant food fertilizers should be used in combination with a comprehensive ground fertility program and foliar applied at appropriate times and growth stages for the individual crop.

Limitations, Restrictions, and Exceptions

Soil: For perennial crops, AGROBEST liquid plant food can be band sprayed at the base of the plant at a rate of 1 to 4 gallons per acre with sufficient water to soak in. Alternatively, AGROBEST liquid plant food can be fertigated at rates of 1 to 2 gallons per acre. For best result it is recommended to fertigate low rates and apply more frequently when possible.
