

# CITRUS AND AVOCADOS - SOIL APPLICATION

## General Information

Agro-K's Multi-Purpose Micronutrients is a balanced blend of seven lingsulfonate chelated micronutrients designed to correct and/or prevent micronutrient deficiencies. Multi-Purpose Micronutrients contains: sulfur, iron, zinc, manganese, copper, boron and molybdenum. Trace elements regulate and manage a wide range of metabolic processes within plants.

Deficiencies of any one or more elements can negatively affect plant growth and production as well as plant health and fruit quality.

Mutli-Purpose Micronutrients is a versatile blend that can be used in soil and foliar applications. As with all Agro-K foliar products, Mutli-Purpose Micronutrients is manufactured for rapid uptake and absorption through plant tissue and stomata. When used in the soil, availability is also excellent.

## Limitations, Restrictions, and Exceptions

### Citrus and Avocados

Soil: apply 1 to 4 pints per acre (1 to 5 liters/hectare) through the irrigation system or spray at the base of the plants prior to flood irrigating. Apply every 4-6 months as needed.
