

GRAPES - FOLIAR APPLICATION

General Information

Agro-K's Multi-Purpose Micronutrients is a balanced blend of seven lingsulfonate chelated micronutrients designed to correct and/or prevent micronutrient deficiencies. Multi-Purpose Micronutrients contains: sulfur, iron, zinc, manganese, copper, boron and molybdenum. Trace elements regulate and manage a wide range of metabolic processes within plants.

Deficiencies of any one or more elements can negatively affect plant growth and production as well as plant health and fruit quality.

Mutli-Purpose Micronutrients is a versatile blend that can be used in soil and foliar applications. As with all Agro-K foliar products, Mutli-Purpose Micronutrients is manufactured for rapid uptake and absorption through plant tissue and stomata. When used in the soil, availability is also excellent.

Limitations, Restrictions, and Exceptions

Grapes

Foliar: If needed to correct deficiencies, apply first application two-three weeks prior to bloom. Apply subsequent applications as needed and determined by leaf analysis.
