

RASPBERRIES, BLACKBERRIES AND OTHER CANEBERRIES - SOIL APPLICATION

General Information

Agro-K's Multi-Purpose Micronutrients is a balanced blend of seven lingsulfonate chelated micronutrients designed to correct and/or prevent micronutrient deficiencies. Multi-Purpose Micronutrients contains: sulfur, iron, zinc, manganese, copper, boron and molybdenum. Trace elements regulate and manage a wide range of metabolic processes within plants.

Deficiencies of any one or more elements can negatively affect plant growth and production as well as plant health and fruit quality.

Mutli-Purpose Micronutrients is a versatile blend that can be used in soil and foliar applications. As with all Agro-K foliar products, Mutli-Purpose Micronutrients is manufactured for rapid uptake and absorption through plant tissue and stomata. When used in the soil, availability is also excellent.

Limitations, Restrictions, and Exceptions

Raspberries, Blackberries and Other Caneberries

Soil: apply 1 to 4 pints per acre (1 to 5 liters/hectare) through the irrigation system at first irrigation or band spray during early spring.
