

## **FOLIAR USE**

### General Information

#### Directions for Commercial Use:

System-VT is designed to supply key nutrients to a variety of row crops as they transition from the vegetative to reproductive phase – such as tasseling in corn – to improve seed fill and maximize yield. System-VT is intended for foliar use.

Apply 2 to 8 pints per acre with sufficient water for thorough coverage. System-VT can be applied via ground sprayer, air application or chemigated through pivots (minimizing the amount of water applied).

**WARNING** - System-VT is compatible with many fertilizers and pesticides but a compatibility check is recommended. Always ensure adequate dilution in the spray tank before adding System-VT to any mixture. Never mix System-VT in a concentrated form with other fertilizers or pesticides. Do not mix System-VT with pesticides that are sensitive to low pH solutions, including copper based products. This product contains boron and should be used only in accordance with directions. Improper use may result in injury to crops. Avoid freezing.
