

INJECTION

General Information

GENERAL INFORMATION

ATLANTIS is a proprietary soil surfactant formulation that reduces the surface tension of water to allow increased infiltration and penetration into mineral soils and soilless plant growth media. ATLANTIS optimizes irrigation efficiency and improves delivery of water to the root zone, resulting in optimized growing conditions. ATLANTIS IS FORMULATED FOR USE ON AGRICULTURAL AND ORNAMENTAL CROPS, GOLF COURSES, ATHLETIC FIELDS, AND RESIDENTIAL OR COMMERCIAL LAWNS UNDER THE SUPERVISION OF TRAINED GROWERS AND APPLICATORS. ATLANTIS can be applied as an injection in irrigation systems or through conventional spray equipment.

DIRECTIONS FOR USE

ATLANTIS can be safely applied throughout the growing season to prevent or treat soil conditions that limit water infiltration and increase plant stress. ATLANTIS is compatible with most fertilizers and pesticides. It is always recommended to conduct a jar test prior to full field application.

Limitations, Restrictions, and Exceptions

INJECTION

- Apply in the first half of the irrigation set after the lines have been charged to allow lines to flush and move product into the soil. Apply every 30 days or as needed.
