

OUTDOOR USE AROUND THE HOUSEHOLD (SURFACE AREA OF STANDING WATER - 5 TO 25 SQUARE FEET)

General Information

GENERAL INFORMATION

MOSQUITO DUNKS float on water and will keep on working for 30 days or longer under typical environmental conditions. While floating, they slowly release a long-term, biological mosquito larvacide at the water's surface. This larvacide gradually settle in the water where it is eaten by mosquito larvae growing there. MOSQUITO DUNKS may be use in all types of containerized standing water sites, except finished, treated drinking water, where mosquito larvae grow. Alternate wetting and drying will not reduce their effectiveness.

Limitations, Restrictions, and Exceptions

Preflood Treatment Around the Household: Apply MOSQUITO DUNKS at the rates recommended to any target sites, which is known to become flooded after a rain. Use the correct amounts in accordance with the dosage.

INDOOR USE: For use in areas that collect water from time to time, areas such as elevator shafts, basements that flood, sump pumps and any drainage areas within buildings.
