

CORN

General Information

APPLICATION DIRECTIONS:

CIDETRAK D applications are bait treatments that require large discrete droplets rather than a full cover spray: A volume mean diameter (VMD) droplet size of 600 µm is recommended. See technical brochure information about how best to achieve this by air and by ground. All screens should be removed from the spray systems, including nozzle and strainer screens, or use screens larger than 6 mesh.

Limitations, Restrictions, and Exceptions

CORN

USDA and several universities have conducted large scale research trials and have found that using a reduced rate of insecticides with CIDETRAK D is as or more effective than using the full label rate.

Note: Follow precautionary statements on insecticide label concerning safe handling and reentry intervals.

Note: Do not apply CIDETRAK D during rain or when rain is expected within 24 hrs. of application.
