OVERSEED TURF

General Information

PRODUCT INFORMATION
This product is a preemergence herbicide that provides residual control of many grass and broadleaf weeds in established turf grasses (excluding golf course putting greens), lawns, sod farms, container, field grown and landscape ornamentals, established perennial & wildflower plantings, non-crop areas on or surrounding managed rights-of-way for transportation systems and utilities (including roadways, roadsides, railways & equipment yards), facilities including substations, tankfarms, pumping stations, parking & storage areas, ungrazed fencerows, plants grown for cut foliage production and Christmas tree farms.

This product controls susceptible weeds by inhibiting weed seeds germination and root development. Most effective weed control will be obtained when this product is activated by at least 0.5 inch of rainfall or irrigation, or with shallow (1 to 2 inches) incorporation, prior to weed seed germination and within 14 days following application.

Do not graze or feed livestock forage cut from areas treated with this product. Do not apply this product through any type of irrigation system unless otherwise instructed by this label. Do not apply to golf course putting greens. Do not apply aerially.

APPLICATION DIRECTIONS
Apply uniformly through suitable, calibrated application equipment.

NEW PLANTINGS, REPLANTING AND CROP ROTATION
Do not apply this product to areas that are to be seeded or have been seeded until the plants have emerged and are well established.

Nursery, landscape, or noncropland areas treated with this product should be rotated only to ornamental species listed on the label for 1 year following application unless the following test has shown species safety:

Before planting a species not listed on this label, it is recommended that several test strips of an indicator plant, such as wheat, sorghum or corn be sown into the
treated area. If the indicator plants germinate and grow normally to a height of 12 inches with normal root development, it is safe to plant.

If the treated area has been disturbed by new plantings or replantings of labeled species, it may be necessary to retreat the newly exposed soil areas for optimal weed control.

Limitations, Restrictions, and Exceptions

Weeds Controlled

Bluegrass, Annual: In areas where Poa annua is a winter annual, apply this product in August or September to established, non-overseeded turf before Poa annua seeds germinate. This timing is approximate. For specific timing for your area, contact your local State Extension Service.

Crabgrass (Large, Smooth): Fall Applications for Spring Crabgrass Control in Cool-Season turfgrasses: In areas where the ground freezes in the winter, apply this product in the fall after the soil temperature is below 50°F, but before the ground freezes to control crabgrass the following spring.

Goosegrass: In many areas a single application will control goosegrass. However, under heavy goosegrass pressure and/or an extended growing season, make a second application after 60 to 90 days (if recommended for your turfgrass species).

Rescuegrass: Suppression only.

When to Apply After Overseeding Turf

Do not apply to overseeded turf within 60 days after seeding or until after the second mowing, whichever is longer. Injury to desirable seedlings is likely if this product is applied before seedling secondary roots are in the second inch of soil, not thatch plus soil.

When to Overseed After Application - All States

This product will inhibit the germination of turf species if overseeded too soon after application. Follow rates and intervals in the label for best overseeding/reseeding results.

Note: In AZ, CA, NV and TX, the overseeding interval can be shorter in established
bermudagrass that has been overseeded with perennial ryegrass. See the next section "Poa annua Control in Established Bermudagrass Overseeded with Perennial Ryegrass (AZ, CA, NV and TX only)".

Method

**Broadcast**

RATES

- field_rates 0
- field_rates 1
- field_rates 2

Restricted Entry Interval

12 hours

Exception: If the product is soil injected or soil incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

Timings

**Prior to germination of the target weeds.**

**In early spring prior to crabgrass emergence.**
