POA ANNUA CONTROL IN ESTABLISHED BERMUDAGRASS
OVERSEEDED WITH PERENNIAL RYEGRASS (AZ, CA, NV AND TX
ONLY)

General Information

PRODUCT INFORMATION
This product is a preemergence herbicide that provides residual control of many
grass and broadleaf weeds in established turf grasses (excluding golf course putting
greens), lawns, sod farms, container, field grown and landscape ornamentals,
established perennial & wildflower plantings, non-crop areas on or surrounding
managed rights-of-way for transportation systems and utilities (including roadways,
roadsides, railways & equipment yards), facilities including substations, tankfarms,
pumping stations, parking & storage areas, ungrazed fencerows, plants grown for
cut foliage production and Christmas tree farms.

This product controls susceptible weeds by inhibiting weed seeds germination and
root development. Most effective weed control will be obtained when this product is
activated by at least 0.5 inch of rainfall or irrigation, or with shallow (1 to 2 inches)
incorporation, prior to weed seed germination and within 14 days following
application.

Do not graze or feed livestock forage cut from areas treated with this product. Do
not apply this product through any type of irrigation system unless otherwise
instructed by this label. Do not apply to golf course putting greens. Do not apply
aerially.

APPLICATION DIRECTIONS
Apply uniformly through suitable, calibrated application equipment.

NEW PLANTINGS, REPLANTING AND CROP ROTATION

Do not apply this product to areas that are to be seeded or have been seeded until
the plants have emerged and are well established.

Nursery, landscape, or noncropland areas treated with this product should be
rotated only to ornamental species listed on the label for 1 year following
application unless the following test has shown species safety:

Before planting a species not listed on this label, it is recommended that several test strips of an indicator plant, such as wheat, sorghum or corn be sown into the treated area. If the indicator plants germinate and grow normally to a height of 12 inches with normal root development, it is safe to plant.

If the treated area has been disturbed by new plantings or replantings of labeled species, it may be necessary to retreat the newly exposed soil areas for optimal weed control.

Limitations, Restrictions, and Exceptions

Poa annua Control in Established Bermudagrass Overseeded with Perennial Ryegrass (AZ, CA, NV and TX only)

Use on golf courses (excluding golf course putting greens) and lawns when overseeding with perennial ryegrass (minimum seed rate of 350 lbs./A).

When to Apply

- 6 to 8 weeks before ryegrass overseeding
- Second application 4-8 weeks after overseeding date or when perennial ryegrass roots are in the second inch of soil

Expected Control

- One application for 70% or greater control of Poa annua
- Second application should enhance the residual under normal weather conditions

Use Precautions

1. Some seed mortality and temporary reduction in root growth of new seedlings may occur.

2. To reduce the potential for seeding mortality, maintain a moist seedbed with light, frequent irrigation.

3. Make no more than 2 applications per year for this use, and do not exceed 4 lbs./1,000 sq. ft. (176 lbs./A) for these two applications for Poa annua control in
ryegrass overseeded turf.

4. Do not make a second application if any injury to the ryegrass is observed after the first application.

5. Do not make a second application unless the product was first applied before overseeding.

Use Precautions and Restrictions

The following precautions apply to the use of this product in turf grasses and lawns:

- Application of this product may thin emerged annual bluegrass and newly overseeded grasses.

- Do not apply to overseeded turf within 60 days after seeding or until after the second mowing, whichever is longer.

- Injury to desirable seedlings is likely if this product is applied before seedling secondary roots are in the second inch of soil, not thatch plus soil.

- Do not cut (harvest) treated sod before 120 days after application. Do not apply to newly set sod until the following year.

- Application of this product to turf stressed by drought, low fertility, or pest damage may result in turf injury.

- Disturbing the herbicide barrier with cultural practices such as disking may result in reduced weed control.

- Do not apply this product to putting greens or areas where dichondra, colonial bentgrass, velvet bentgrass, or annual bluegrass (Poa annua) are desirable species.

- Do not apply to golf course putting greens.

Restricted Entry Interval

12 hours

Exception: If the product is soil injected or soil incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

Timings
6 to 8 weeks before ryegrass overseeding.
